

Modular Prefabricated Shelters Innovative solution for defense

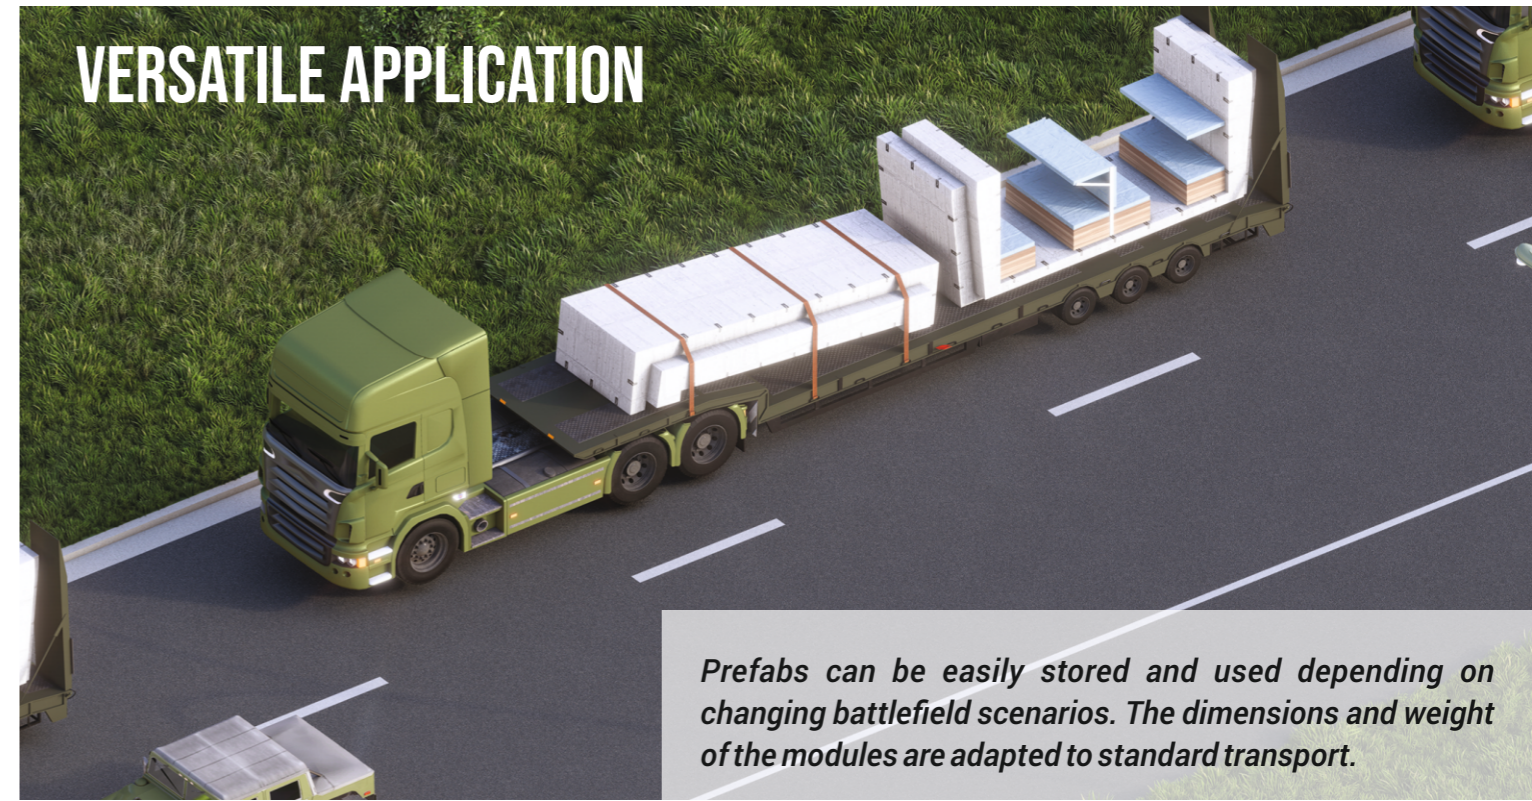

Our modular prefabricated shelters are designed to meet the specific requirements of the military. The system is based on durable reinforced concrete prefabs, which, thanks to a unique system of connectors, can be quickly and solidly assembled and disassembled. This solution ensures not only durability and stability, but also the possibility of repeated use of elements in various configurations.

The modular design allows for the creation of shelters for people, equipment and ammunition storage, medical points, and garages for combat vehicles. Thanks to their compact dimensions, the prefabs are easy to transport, enabling their use in any location. This versatile and flexible solution works perfectly in dynamically changing operational conditions.

SPEED AND SIMPLICITY OF ASSEMBLY

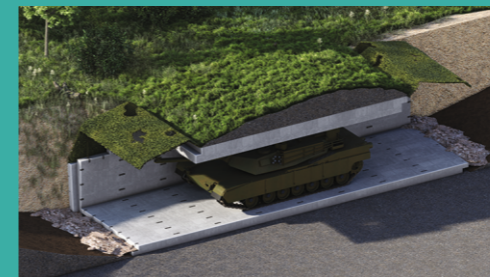

VERSATILE APPLICATION

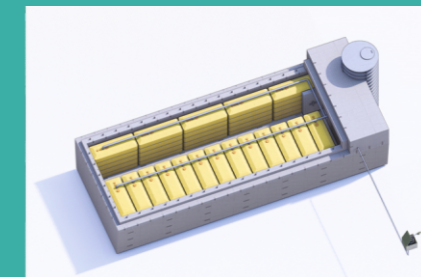

Prefabs can be easily stored and used depending on changing battlefield scenarios. The dimensions and weight of the modules are adapted to standard transport.

Examples of application of ODR modular shelters

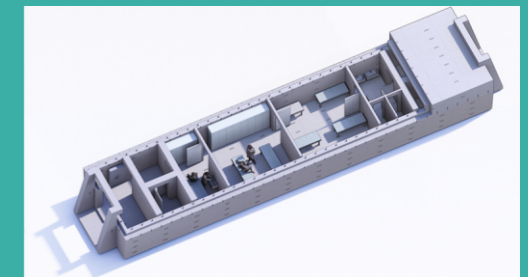

Shelters are available in above-ground and underground versions.

Shelter for armored vehicles

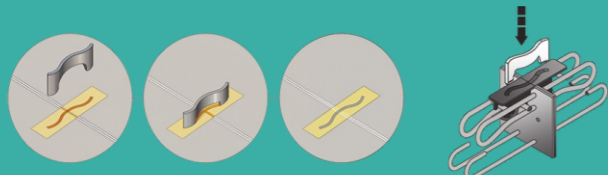

Fuel depot

Field hospital

Unique method of connecting prefabs

The Sinus steel connector system is a solution that distinguishes our shelters from other structures. These connectors are designed to be extremely easy to install - just hammer them in, which enables quick action even with limited access to qualified personnel or specialized tools. An additional advantage is the stepped profile of the prefab edges, which not only strengthens the entire structure, but also allows for effective sealing of the connections. Thanks to this, the assembly is efficient, and the finished shelter is resistant to external factors. This solution guarantees reliability in all operational conditions.

Polish product, global quality

The innovative shelter system is the result of cooperation between a team of Polish experts – architects and construction engineers. A key element of the system is the patented sinus-type connector, which has undergone rigorous testing in the laboratories of the Koszalin University of Technology. Our solution provides comprehensive protection not only for soldiers, but also for armored vehicles and critical military resources such as fuel, ammunition and precision military equipment.

One Day Ready Shelter

ODR modular prefabricated shelters are a solution that has no equivalent.

The combination of a durable reinforced concrete structure with a simple, innovative connection system ensures reliability and long-term resistance to various factors. All elements, including the connector and the shelter system, have been patented and tested at a technical university, which guarantees their high quality.

The modular design enables easy adaptation of the shelters to changing needs, and their above-ground and underground versions are suitable for various operational conditions.

Safety

Innovative modular shelters provide soldiers with safe and durable shelter that can be quickly deployed exactly where the tactical situation requires.

Modularity

The flexible configuration of the shelters allows for free adjustment of their size to current requirements. By adding or removing standard segments, the usable space of the object can be quickly modified.

Speed and simplicity of assembly

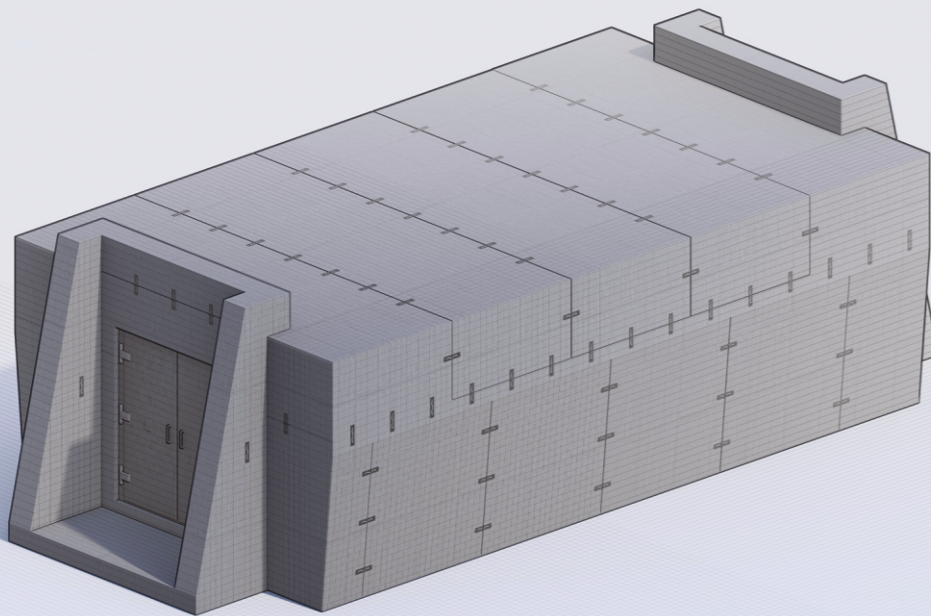

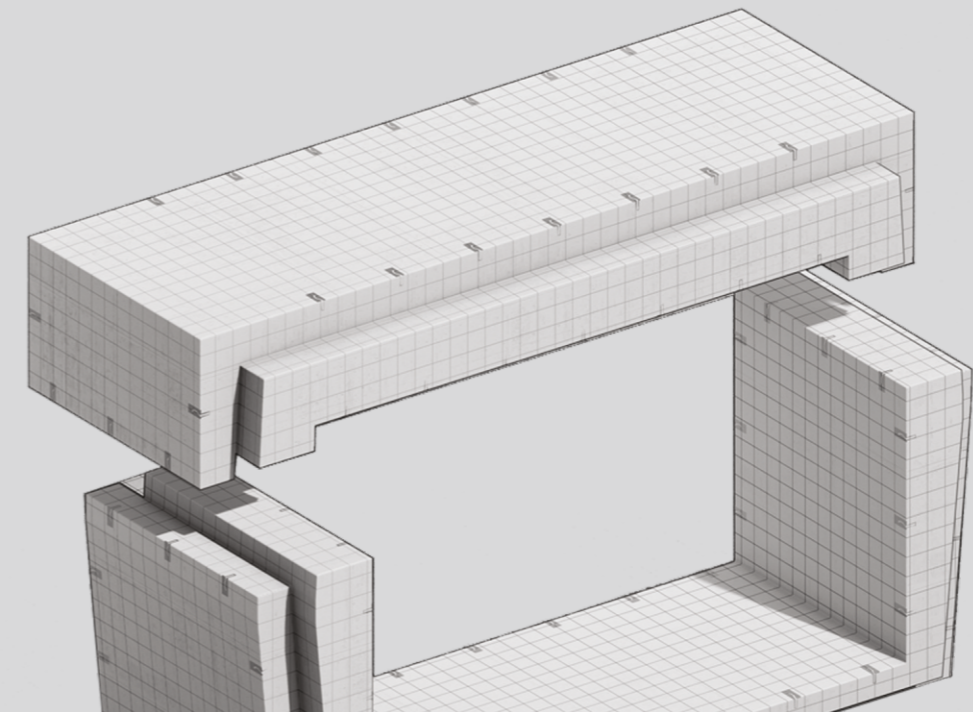

The innovative system of connecting prefabs enables quick joining of elements without the use of specialized tools. The simple assembly can be carried out by any team member, which distinguishes our solution from competitive products.

Universal logistics

The design of the shelters is fully compatible with road, sea, and rail transport, ensuring efficient movement in all conditions.

MODULAR PROTECTION. POLISH INNOVATION.
